

1. Site Survey

An expert Site Technician will visit to measure, review and finalize the plans we initially discussed. Just show them in and get back to your day.

2. Design Review

We follow-up to review any tweaks or changes to our initial plan and make sure you're happy with the result.

3. Permitting

We'll handle the permitting and paperwork with the city. We'll let you know when everything is good to go.

4. Installation

Your roof gets an upgrade! The average install will take about a day, but you just need to be there to let us in.

5. City Inspection

Once your system is installed, we'll schedule the inspection with the city. A representative will stop by to ensure the new system is up to code.

6. Utility Connection

We'll work with your utility to get everything connected. The utility will connect your system to the grid and may need to install a new meter.

7. Power On

Once your system is installed, we'll schedule the inspection with the city. A representative will stop by to ensure the new system is up to code.
