

## HOW SOLAR WORKS

Solar power is simple and efficient. It essentially cuts out the middle man by getting power right off your roof. Solar panels and an inverter are installed on your roof, and the solar panels immediately start generating DC currency. Your home uses AC currency, and the inverter converts electricity from DC to the AC

currency your home uses and runs it right into your home. More often than not, the solar panels will generate more power than you need and you'll put that power back into the grid and be able to use it when you need it in the form of a credit from the power company or from storage in a solar battery.

### **Zero Maintenance Options**

Installation, monitoring and repairs can be added as needed for the life of your agreement.

### **Zero Cost at Install**

With enrollment in a Power Purchase Agreement, lease, or loan product.

### **Fixed Energy Bills**

You know what you'll pay every month. Why wait to start saving?

### **100% Transferable**

If you move, there are no extra transfer fees.

### **Rollover Power**

You benefit from any extra power the system generates.

### **Peace of Mind**

Warranties and workmanship guarantees come standard and some products include a production guarantee.

### **24 Hour monitoring**

Your system may come with cellular chips inside the equipment that monitor the system 24 hours a day.
